		twice a week. Sanitation maintained by removing/securing attractants (carcasses were removed).		depredation events, each with one dead calf.		wolf pack.	Advisory Group and Interested Parties list on Aug 19, 2016. Department emailed the information on the seventh confirmed wolf depredation to the Wolf Advisory Group and Interested Parties list on August 25, 2016.
08-21-16	Profanity Peak pack	--	--	--	--	WDFW removed one adult male wolf from Profanity Peak pack.	--
08-22-16	Profanity Peak pack	--	--	--	--	WDFW removed three wolves from the Profanity Peak pack; one adult male, one adult female, and a female pup.	--
08-25-16	Profanity Peak pack	--	--	--	--	--	Department emailed an update on the lethal removal action to the Wolf Advisory Group and Interested Parties list on August 25, 2016.
08-31-16	Profanity Peak pack	<ul style="list-style-type: none"> • Turned out earlier born calves desiring calves on allotment to be 200 lbs. or larger. • Rancher/employees on 	A range rider deployed on this large and remote allotment with concurrence from the producer and WDFW.	One confirmed depredation event, with one dead calf.	Yes	--	Same producer and grazing area as depredation on 07-08-16.

		allotment approx. twice a week. Sanitation maintained by removing/securing attractants (carcass secured).	See note a.				
09-02-16	Profanity Peak pack	--	--	--	--	--	Department emailed an update on the lethal removal action to the Wolf Advisory Group and Interested Parties list on September 2, 2016.

Notes:

^a The livestock producer implemented the following reactive deterrence measures:

- Deployed a range rider equipped with GPS locations of the two collared wolves,
- Hired two people to patrol the allotment on horseback and/or foot to move cows as outlined in their US Forest Service allotment plan, to monitor cattle behavior, and look for injured or dead cattle,
- Increased family presence on the allotment from 2-3 times a week to 4-5 times a week,
- And the range rider, along with the Department, investigated clusters of GPS wolf locations near cattle to help detect potential wolf depredations on cattle.
